

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

**THE ANGLERS COMPANY,
DEPT. 100**

Established 1899.

913 W. Randolph Street. Chicago, Ill.

Powers. & Powers
HIGH GRADE
Microscopic Slides
AND
Living Micro-Organisms

Living Amaba Proteus and Living Fresh Water Hydra.—We were the first in America to develop the rearing and shipping of these organisms to all parts of the continent. We ship to every State in the Union and even as far as Nova Scotia. Living delivery always guaranteed within the months of the school year. We have a private plant of our own especially adapted to these and other micro-organisms.

Microscopic Slides.—We have a growing list of high grade preparations for the microscope, chiefly in zoology. We endeavor to produce slides of unusual excellence. Many are quite unprocurable elsewhere.

FS2 Microscope — With Two Objectives in Revolving Nosepiece, \$64.00

Bausch^{and} Lomb Microscopes

When you buy a Bausch & Lomb Microscope you buy the cumulative results of 66 years of optical endeavor and manufacturing experience.

During that period we have developed every optical refinement and mechanical improvement demanded by the practices of modern microscopy.

Our optics—designed, tested and controlled in manufacture by our own Scientific Bureau—have

withstood the most exacting, long-time tests of research laboratories.

Our side fine adjustment is of the most approved lever type—highly sensitive and durable.

There is a Bausch & Lomb model for every microscopical requirement. Write for our new complete catalog.

SPENCER SCIENTIFIC INSTRUMENTS

whether
MICROSCOPES, MICROTOMES,
DELINEASCOPES, TELESCOPES,
PHOTO-MICROSCOPIC CAMERAS
OR OTHER APPARATUS,

**MAKE
AN
INSTINCTIVE
APPEAL
TO THE**

LABORATORY WORKER

It isn't only their accuracy and utility, it's something in the finish, even more in the design, but in addition to all these, it is those little things—clever little devices, which accomplish the same end, but in a better way—exactly the way that the laboratory worker wants them.

These are the distinctive features of Spencer instruments, made distinctive because our designers—experienced laboratory men, possess the laboratory view-point.

SPENCER MON-OBJECTIVE BINOCULAR MICROSCOPES

Possess all the features of construction which experience has shown to be meritorious and advantageous. Among them is one very distinctive feature which distinguishes the Spencer from all others, viz.:

CONVERGENT EYEPIECE TUBES

which avoids the excessive and false conception of perspective otherwise produced, giving a correct interpretation of the object under examination.

1920 catalogue now ready.

SPECIALIZATION is by no means a selfish isolation in a narrow line of interests, but rather it consists in making one's greatest interest the axis for the grouping of the others. The conditions of modern life have settled it for us that the only well-educated man is a specialist, one who knows something well, it matters not so much what, and has sympathy for other things.—*Dr. William F. Ganong.*

Every technical specialist in Microscopy has a sympathy for "other things"—amateur and elementary microscopy, also for all other departments of Nature Study.

You, Specialist, may please your "sympathy" and aid a Good Cause by active interest in

THE GUIDE TO NATURE

This monthly, illustrated magazine is devoted not to extreme knowledge but to "uncommon interest."

Biological Material

1. ZOOLOGY. Preserved material of all types of animals for class work and for the museum.
2. EMBRYOLOGY. Stages of some invertebrates, fishes (including *Acanthias*, *Amia* and *Lepidosteus*), *Amphibia*, and some mammals.
3. BOTANY. Preserved material of *Algae*, *Fungi*, *Liverworts*, and *Mosses*.

Price lists furnished on application to
GEORGE M. GRAY, Curator
Woods Hole, Mass.

Correspondence solicited on special orders, e.g., giving marine or aquatic material.

The Silverman Illuminator

offers important advantages for practically
every application of the Microscope:

- a—It shows more detail.
- b—A clearer and better defined picture is presented to the eye and the camera.
- c—Several novel methods of illumination can be provided.
- d—It saves much valuable time.
- e—It prevents eye strain, eye fatigue and brain fag.
- f—It can be lowered into deep hollow objects.
- g—It gives excellent results for very low power work as well as higher magnifications, also in oil immersion work.

- h—It can be used with any microscope, ordinary or binocular.

A small circular tube lamp surrounds the objective and furnishes a diffused and uniform illumination directly where it is needed.

The Silverman Illuminator marks
A GREAT ADVANCE
